

PharmacyPro Update News, October 2008

Used worldwide in over 3000 sites

Backup

It is extremely important to do backups on a daily and monthly basis. Not only will this provide a safe copy for off site, but it will also reload the current copy of your database to all other slave machines. In unexpected circumstances, any slave machine can turn into the master if the master fails.

Our Techies recommend four memory sticks – one for a monthly backup and the rest to be alternated for daily backups.

Please do not change any files, especially the ini file, on the disk as this can cause trouble.

Dispense Program

You are now able to enter a PBS code in the drug lookup field when dispensing a drug.

Auto Download Monthly Update

If you are not already auto downloading the monthly update, please go to Tools, Options. On the Switchboard tab, tick the 'Auto Download Monthly Update' box.

Before auto downloading the monthly update, it is a good idea to reboot the master machine after closing PharmacyPro on all the slave machines. This will ensure the auto download runs smoothly.

Incentive Payment Report

Go to the PharmacyPro Start Menu – Claims – CTS/PBSOnline Claims.

Then select Incentive Payment Report. This will show all scripts paid the \$1.50 incentive.

F2 Drug

PharmacyPro will display different colours as below for F2 dispensed drugs, eg. the

approval column will be orange for those scripts not paid \$1.50.

Script	Pat	PDE	Drug & Instructions	Collect	Time	Approval
74250	S JA	829854	30 AXIT 30MG T BLISTER 1 m	No	2:57 pm	Not Paid

If you prefer not to have so many colours, go to Options, PharmacyPro Options and untick 'Highlight Approval Column with 40 Cents Payment'.

If a non-F2 drug is selected during dispensing, you will get the following screen:

PMP

For those that are doing PMP, the tablet/capsule images are available. Please fax us to let us know a convenient time for us to download the drug images onto your PharmacyPro computers.

Product Group Report

There is an option for you to tick “Use SOH during Time Period” to view SOH for previous months.

Did You Know?

The recording of medication interventions and ‘near misses’ can be easily done in *PharmacyPro*. Any Pharmacist intervention can be recorded against a script item and collated together on an ‘Intervention Report’.

To add an intervention:

- On the ‘Main Dispensary’ screen (or from Patient History) highlight the script item
- Right mouse click on ‘Add/Edit Intervention’. A form will come up with seven reasons and six grades of interventions.
- Select the reasons and grades to match your intervention. There is a drug card called ‘Drug Not Dispensed’ which can be used for any drugs not

dispensed because of the intervention, ie. dispense ‘Drug Not Dispensed’ for a patient and record the name of the drug in the instructions.

To report interventions: in Reports, Script Reports, Interventions there is an export button to enable this information to be exported. For example, to save the Intervention Report onto a flash drive: select the ‘Export’ button, the ‘Save As’ screen will come up. In the ‘Save In’ box select the flash drive, enter in a file name and then select ‘Save’

Suppliers

The following Supplier files have been updated in *PharmacyPro* this month.

Amcal
Blackmores
Chem Pharm
Embrace
Garnier
Gibson
Guardian
L’Oreal
Maybelline
Mode
