

PharmacyPro Update News, December 2008

Used worldwide in over 3000 sites

December Update/Install Disk

This month we have sent everyone a *PharmacyPro* update disk, which also includes the Install set. This should only be used if you have problems downloading the Update from the Internet or need it for installing a new computer.

We ask that you tape this disk to the side of your computer for any future use and let your Locum know where it is in case of any computer hardware failure during the holidays.

Automatic Download of Monthly Update

In mid-November we sent out a memo regarding Automatic Downloading of the Monthly Update, beginning from December. If you haven't set this up you can download the update manually: from the *PharmacyPro* Start Menu go to Tools, Update, Download Monthly Update.

To read the newsletter, from the *PharmacyPro* Start Menu either:

- (a) select 'View Latest Newsletter' in the bottom right hand corner; or
- (b) select Sales, then 'View Latest Newsletter' on the left hand side

HealthSoft Hours over Christmas/New Year Holiday Period

As usual we're here to help over Christmas. We are available on all normal working days and can also provide an extra emergency service on weekends and stat holidays by phone. There is a charge for this if needed, as it falls outside normal support.

Email Statements – and Save Trees!

If you're not already receiving our statements by email, please let us know

the email address you'd like us to send them to. Of course you can use this same feature in *PharmacyPro* to email your customers too. Once set up, it is just a click of a button to send all your email accounts.

Patient Medication Profile

If you are running PMP and haven't yet downloaded the images file, would you please send us a fax and we will download the images for you.

Did You Know?

Non Active (Red) Drugs

Hiding Non Active (Red) Drugs can save time. To hide unused products: from the *PharmacyPro* Start Menu, go to Dispense, select Options from the top menu, *PharmacyPro* Options, then tick or untick 'Hide Non Active Drugs'.

This can also be switched on or off on the drug selection screen when dispensing. If the non active drugs are hidden, click on 'Show All' to unhide them. To hide non active drugs, click on 'Hide'.
