

Important Update to PharmacyPro

You should have received a CD in the post. If you haven't yet run it, please do so before 27 February, following the instructions provided.

During the first week of March you will be asked to leave all your computers on overnight in order that an important update can run.

Please leave all computers on. PharmacyPro will install some support modules required for future versions of PharmacyPro. This will not affect your current version of PharmacyPro.

This may take 1-2 hours and you won't be able to use PharmacyPro.

IN THIS ISSUE:

- Important Update to PharmacyPro
- Dead Stock Prepare For a Fright
- Price Reductions for 1st April
- Is It Time to Clean Your Computer?
- Supplier Files

Dead Stock.....Prepare For a Fright

When did you last look at your PharmacyPro Overstocked/Dead Items Report? The correct answer is actually "almost never" and that's the answer you'd give if PharmacyPro did all your orders all of the time. It's proven to be 97% correct and better than any person can possibly do because it crunches over 20 calculations for every single line it orders.

Life isn't quite that simple as there are new ranges that require a buyer to have input and guess trends. Dead stock happens in retail but sniffing it out is not easy to spot. Run the PharmacyPro Overstocked/Dead Items Report every quarter to half year and be brutal with that information. If something hasn't sold in 4-5 months it is most unlikely to sell at all, so ditch it pronto. There is never a shortage of new lines to get in store, but clearing the old stock frees space and adds cashflow.

Any time is a great time to get the dead stock out....but be prepared for a fright.

PRICE REDUCTIONS FOR 1ST APRIL

We have marked products due for reductions on 1 April as F2A's. F2A is not a correct designation, so we'll change this in future.

These will show in a purple colour in Orders, and with a note 'F2A' next to the drug name in Dispense.

IS IT TIME TO CLEAN YOUR COMPUTER?

The picture below is an example of how much dust and debris can accumulate in computers over time. It is important to clear cooling fans, heatsinks and other delicate electronics before serious damage is caused.

Please contact your local technician if you think your computer is due for a clean.

SUPPLIER FILES

The following files have been updated in PharmacyPro this month.

As other suppliers send files during the month they will be available within PharmacyPro. From the PharmacyPro Start Menu go to Tools, Update, Download Supplier Files.

Almay	Guardian
